Santa wants to analyze which toys that were produced in his workshop have already been delivered to children....

**Question 1:** Santa wants to analyze which toys that were produced in his workshop have already been delivered to children. You are given two tables on toy production and toy delivery — can you return the toy ID and toy name of the toys that have been delivered?

```
SELECT  
    toy_production.toy_id,  
    toy_production.toy_name  
FROM toy_delivery  
INNER JOIN toy_production  
ON toy_delivery.toy_id = toy_production.toy_id
```
